

PRODUCT: Please-Confirm

Are you:

- hosting an event
- need to invite lots of people
- ... and you have most of their email addresses
- don't have lots of money to spend on invitations
- don't have time to send them all one-by-one in the post
- don't believe the postal system will deliver half of them
- and are on a bit of a budget?

Well we've got the answer!

By sending a batch email to everyone from your normal email system, you can get your contacts to go visit your website to accept or decline your invitation.

At any time you can login to your website to see the list of people who are and who aren't coming to your event. Then a few days before the event you can simply do a mailing from the admin area of the website to all the people who are coming to remind them of the event! It really couldn't be any simpler!

Features of Please-Confirm include:

Admin Control Panel

The password protected control panel, allows you to create multiple subscribe lists, edit subscriber details, change general settings, view subscriber lists, send emails to each individual list, change the HTML email templates, take a backup, restore a back of your lists, etc etc.

Accept / Decline invitations

A couple of designated pages on the website will allow your visitors to accept or decline your invitation. Once they have filled out the simple form, their details will be submitted to the relevant list you created in the admin area. They will also be sent an email confirming their action.
